

Environmental Policy

The company CLARIMOND MANIFATTURA, evaluating the environment as a conditioning and strategic factor in the exercise and development of company activities, has adopted an Environmental Policy aimed at identifying the environmental aspects determined by its activities and seizing the opportunities improvement that can emerge in the coming years.

The corporate action is therefore aimed at satisfying not only customer requests and legislative and regulatory requirements, but also environmental protection requirements with a constructive attitude on environmental issues.

In this sense it commits itself to:

- Train and authorize personnel to identify and reduce the impact of company activities on the environment, promoting at all levels a widespread sense of responsibility towards the environment, including through the enhancement of the event management service;
- Manage all business activities in compliance with national and international laws and regulations and other signed ones and to monitor such compliance;
- Preventing pollution by managing the company, designing and implementing any changes or new activities in consideration of the interactions with the various environmental sectors and with the local context;
- Ensuring the continuous improvement of environmental performance, by appropriately defining measurement methods for their systematic evaluation;
- Replace and / or improve company equipment for a lower environmental impact;
- Optimizing the use of natural resources through the rational and efficient use of energy resources and materials, through consumption control;
- Disseminate its environmental policy with its suppliers and include environmental aspects among its supplier evaluation criteria;
- Communicate with customers and suppliers and institutions to improve the sharing of environmental management with these subjects.
